PROFILE

Computer Science B.S. graduate (University of Utah, May 2025) with deep expertise in systems programming, infrastructure security, and large-team engineering. Led a 30-person capstone game project to completion, built and currently operate a production-grade homelab with NixOS + SOPS-encrypted deployments serving 15+ services. In addition, I responsibly disclosed a critical vulnerability that exposed PII of 500,000+ individuals in the nation's second-largest school district.

EDUCATION

University of Utah Salt Lake City, UT
Bachelor of Science in Computer Science, Emphasis in Game Development Sep. 2021 – May 2025
Relevant Coursework: Comp. Networks, Comp. Security, Comp. Systems, Parallel Programming, Artificial Intelligence, Programming Languages, Comp. Graphics, Linear Algebra, Calc. I-III, Capstone Game Development, Traditional Game Development

Pierce Community College Woodland Hills, CA
Concurrent Study Senior Year: Computer Programming Aug. 2020 – Jun. 2021

PROJECTS

Homelab System Administration | *Docker, Nginx, Wireguard, Grafana, Prometheus, Linux* Jan 2021 – Present

- Containerized internet facing applications using Docker to minimize exposure
- Created Grafana dashboard with Prometheus aggregation to monitor **15+** services
- Configured Nginx reverse proxy with automated TLS renewal and custom load balancing for 10+ internal tools
- Engineered fully reproducible, secret-encrypted deployments using Nix + **SOPS** and **CI/CD** binary caches

Lead Engineer on Tiny Sheriff | *C#, Unity, Jira, Git* Aug 2024 – May 2025

- Led team of 9 engineers and coordinated with 20+ artists/designers using **Scrum** to ship a complete game
- Architected core framework: agnostic event system, save/load manager, and data-driven UI pipeline
- Collaborated directly with UI/UX designers to implement all menus, HUD, and in-game screens

Artificial Intelligence Projects | *Python* August. 2024 – Dec. 2024

- Built and benchmarked handwritten digit classifier on NIST Data (99.4%+ accuracy)
- Developed hyper-parameter search automation and compared modern algorithms for game-bot automation
- Created reusable training pipeline that cut experiment time by around 80%

Engineer on Rockin' Llamas | *C++, Unreal Engine, Perforce, Jira* Jan. 2024 – May 2024

- Designed and implemented modular ability system and dynamic spawn manager used in final game
- Tracked tasks and bugs in **Jira** under **AGILE** allowing consistent on time deliverables during sprints
- Managed asset integration and development using **Perforce**

Comp. Systems Projects | *C, Make, GDB* Jan 2024 – May 2024

- Wrote a fully functional Unix shell with pipes, job control, signals, and redirections
- Implemented high-performance dynamic memory allocator (malloc/free/realloc) with explicit free lists
- Built asynchronous HTTP server and minimal social-media backend from scratch

LAUSD Exploit Disclosure | *Python, Selenium* Sep. 2020 – Dec. 2020

- Discovered a critical vulnerability in **Los Angeles Unified School District** infrastructure exposing **PII** of the **500,000+** students and faculty in LAUSD
- Created a comprehensive report outlining vulnerability details and solutions and presented it to the **Chief of Schools** and the IT Security Department
- Pair programmed a **POC** script demonstrating the gravity of the vulnerability endangering the second largest school district in the nation

TECHNICAL SKILLS

Languages: Rust, Java, Python, C, C++, C#, Nix, POSIX Scripting, LaTeX, CUDA
Technologies: Git, Docker, GitHub Actions, Grafana, Prometheus, Vim, Perforce, Jira, GDB, Ghidra, MAUI, QT, Office Suite
Game Engines: Unreal Engine, Unity, Game Maker Studio
