EDUCATION

University of Utah

Bachelor of Science in Computer Science, Emphasis in Game Development

Salt Lake City, UT

Sep. 2021 – May 2025

Relevant Coursework: Comp. Networks, Comp. Security, Comp. Systems, Parallel Programming, Artificial Intelligence, Programming Languages, Comp. Graphics, Linear Algebra, Calc. I-III, Capstone Game Development, Traditional Game Development

Pierce Community College

Concurrent Study Senior Year: Computer Programming

Woodland Hills, CA

Aug. 2020 – Jun. 2021

PROJECTS

Homelab Management | *Docker, Nginx, Wireguard, Grafana, Prometheus, Linux, NixOS*

Jan 2021 – Present

- Containerized internet facing applications using Docker to minimize exposure
- Created Grafana dashboard with Prometheus aggregation to monitor 15+ services
- Configured Load Balancer/Reverse Proxy as well as Cloudflare NS records to allow access to internal services using Nginx for TLS termination
- Used Nix based tooling with SOPS secret management to ensure fully reproducible and secure deployments

Lead Engineer on Tiny Sheriff | *C#, Unity, Jira, Git*

Aug 2024 – May 2025

- Coordinated with team of 9 engineers and 20+ other disciplines in biweekly meetings to ensure smooth development using SCRUM principles
- Created core system functions such as agnostic event system and save manager
- Worked closely with UI Designers to implement all UI elements such as game screens and HUD

Artificial Intelligence Projects | *Python*

August. 2024 – Dec. 2024

- Developed a digit classifier using NIST handwritten digit data
- Tested and explored various algorithms and their trade offs in AI game automation
- Created tools to automatically train on various hyper-parameters and optimize results

Rockin' Llamas | *C++, Unreal Engine, Perforce, Jira*

Jan. 2024 – May 2024

- Created multiple systems for the game including spawn manager and modular ability system
- Coordinated with team using Jira and AGILE methods to properly address appropriate tasks
- Managed asset integration and development using Perforce

Comp. Systems Projects | *C, Make, GDB*

Jan 2024 – May 2024

- Developed a Unix shell complete with pipes, job control, and signal passthrough
- Created a performant memory allocator based on malloc
- Implemented an asynchronous HTTP handler and social media backend

LAUSD Exploit Disclosure | *Python, Selenium*

Sep. 2020 – Dec. 2020

- Discovered a critical vulnerability in LAUSD infrastructure exposing sensitive information on students and faculty including immediate family, grades, and passwords
- Pair programmed a POC script demonstrating the gravity of the vulnerability
- Created a comprehensive report outlining vulnerability details and solutions and forwarded it to LAUSD IT
- Prevented the vulnerability from exposing information on 500,000+ students and faculty

TECHNICAL SKILLS

Languages: Rust, Java, Python, C, C++, C#, Nix, POSIX Scripting, LaTeX, CUDA

Technologies: Git, Docker, GitHub Actions, Grafana, Prometheus, Vim, Perforce, Jira, GDB, Ghidra, MAUI, QT, Office Suite

Game Engines: Unreal Engine, Unity, Game Maker Studio

INTERESTS

Outdoor: Kayaking, Combat Sports, Climbing

Indoor: Server Management, Reading, Computer Security
